

Tired of false positives?

False positives are one of the most important factors that waste a security team's time. Time is wasted until you realize that what you think is an attempted attack is not actually one. And in the time wasted and resources spent, you could have prevented a real attack instead. Our goal with **SOCRadar** alarms is to reduce false positives to zero, thus helping you use your time and resources in the most effective way.

Drowning in irrelevant data & intelligence?

Security teams have to deal with tons of irrelevant or undesirable data every day. Intelligence, however, differs profoundly from data and information. Too much intelligence that is poorly managed can also obfuscate real threats, while a lack of strategic intelligence results in the poor operational use of data and information. That is why **SOCRadar** believes putting threat intelligence into context is a strategic priority and provides its users relative, contextualized and actionable intelligence.

Looking for a solution to understaffing?

A shortage of cyber security experts is a growing problem all around the world. Organizations have to use resources efficiently to provide effective cyber security with their limited resources. Automated security solutions offer exactly the opportunity that institutions are looking for. In this sense, **SOCRadar** with its automation technology powered by AI has become an extension to the organizations' SOC teams.

Sleepless nights due to possible data leak?

The cost of data breaches – considerable part of which are caused by small mistakes – is rising rapidly. Expired SSL certificates, misconfigured servers or personal email compromise with many other may result in a data breach that can cost the organization millions of dollars. Along with financial and reputational losses, the pressure on the security team increases immensely. **SOCRadar** aims to minimize security risks that may arise due to significant details that may be overlooked.

1 Platform 3 Suites 25 Modules

EXTENDED THREAT INTELLIGENCE

Threat intelligence enriched with External Attack Surface Management and Digital Risk Protection. Maximize the efficiency of your SOC team with false-positive free, actionable, and contextualized threat intelligence. Intelligence, which is not a luxury, differs profoundly from data and information. Organizations find themselves in a pool of data and information, but intelligence does not empower them. The lack of strategic intelligence results in the poor operational use of the data and information SOC teams gather excessively from different sources.
